Merlo engineers had a clear objective: designing safe and comfortable machines, features that both aim at improving working conditions. The Panoramic P75.9CS is equipped with active cab suspension, which ensures effective damping under all load, driving and speed conditions. Many innovative solutions have been introduced, adding to the leading visibility of Panoramic models, and ensure high performance typical of larger class machines, while maintaining the compact size and the manoeuvrability of small machines. Merlo design gives the model versatility in agricultural, construction, waste management and production applications. In all Merlo telescopic handlers the engine is mounted to the right side of the chassis, ensuring safe, easy access and maintenance from ground level.
